

AS BUSINESS - DAY 4

Market research

Customers, data and sampling

YOUR AIM TODAY

Understand how a business learns what customers want.

YOUR RULE

Read the notes twice. Use exact case facts. Every explanation must contain a because link and a therefore business impact. Keep page 4 closed.

Student: Rohan

Start time: _____ Finish time: _____

Date: _____

Knowledge and method

Marketing starts with identifying and satisfying customer needs profitably.

- Primary research is new data collected for the business.
- Secondary research already exists, such as reports or government data.
- Qualitative data explains opinions; quantitative data uses numbers.
- A sample is a smaller group used to represent a population.
- Reliable research reduces uncertainty but never removes risk.

MINI CASE

FreshSip plans a low-sugar drink for students. It surveys 20 friends of the founder and finds 90% would buy it. A national report says low-sugar drink sales grew 12% last year.

WORKED CHAIN

The survey is primary and quantitative, but the friends may be biased and unrepresentative. Therefore the 90% result could overestimate demand and cause excess inventory.

Knowledge, application and analysis

Use the mini case in Questions 3-6.

Question	Your answer
1. Define primary research.	
2. Define secondary research.	
3. Identify one primary and one secondary source in the case.	
4. Explain one weakness of FreshSip's sample.	
5. Explain one benefit of the national report.	
6. Recommend one better research method and justify it.	

QUALITY CHECK

Circle every case fact. Underline every because link. Box every business impact.

Models and correction log

Wording may differ, but the knowledge and chains must be accurate.

Q	Answer / model points
1	New data collected first-hand for a specific purpose.
2	Existing data originally collected by someone else.
3	Primary: survey of friends. Secondary: national report.
4	Friends may share similar preferences; the 90% may not represent all students, causing poor demand forecasts.
5	It shows a wider market trend cheaply and quickly, helping FreshSip judge whether demand is growing.
6	Use a larger stratified sample from several schools/colleges so ages and locations are represented, improving reliability before launch.

Q	Missing layer	My improved sentence

SEND FOR MARKING

Send pages 3 and 4. Ask for a level, missing chains, and a rewritten model for the weakest response.
