

AS BUSINESS - DAY 7

Production and productivity

Job, batch, flow and efficiency

YOUR AIM TODAY

Choose a production method and calculate productivity.

YOUR RULE

Read the notes twice. Use exact case facts. Every explanation must contain a because link and a therefore business impact. Keep page 4 closed.

Student: Rohan

Start time: _____ Finish time: _____

Date: _____

Knowledge and method

Operations transforms inputs into outputs customers value.

- Job production makes one customised item at a time.
- Batch production makes groups of identical items.
- Flow production makes standardised output continuously.
- Labour productivity=output/number of workers.
- Higher productivity can lower unit cost, but quality and motivation still matter.

MINI CASE

CraftDesk employs 12 workers and makes 240 standard desks a week in batches. A machine would raise output to 360 with the same workforce but requires training and may reduce custom options.

WORKED CHAIN

Current productivity= $240/12=20$ desks per worker. With the machine it becomes 30, a 50% increase, which may reduce labour cost per desk.

Knowledge, application and analysis

Use the mini case in Questions 3-6.

Question	Your answer
1. Define batch production.	
2. Calculate current labour productivity.	
3. Calculate new productivity.	
4. Calculate percentage increase.	
5. Explain one benefit of the machine.	
6. Explain one risk of moving toward more standardised production.	

QUALITY CHECK

Circle every case fact. Underline every because link. Box every business impact.

Models and correction log

Wording may differ, but the knowledge and chains must be accurate.

Q	Answer / model points
1	Producing a group of identical items before switching to another group.
2	$240/12=20$ desks per worker per week.
3	$360/12=30$.
4	$(30-20)/20 \times 100=50\%$.
5	Higher output with the same workforce may lower unit labour cost and meet more orders.
6	Less customisation may weaken CraftDesk's differentiation and lose customers who value bespoke designs.

Q	Missing layer	My improved sentence

SEND FOR MARKING

Send pages 3 and 4. Ask for a level, missing chains, and a rewritten model for the weakest response.
